BIOHEAT TRANSFER

EQUATIONS

The screenshot displays the software interface for setting up a bioheat transfer problem. On the left, a tree view shows the model structure, with 'Bioheat 1' selected under 'Biological Tissue 1'. The main window shows the 'Equation' settings for 'Bioheat 1'. The 'Domain Selection' section shows 'All domains' selected. The 'Equation' section shows the bioheat transfer equation:

$$\rho C_p \frac{\partial T}{\partial t} + \rho C_p \mathbf{u} \cdot \nabla T + \nabla \cdot \mathbf{q} = Q + Q_{\text{bio}}$$
$$Q_{\text{bio}} = \rho_b C_b \omega_b (T_b - T) + Q_{\text{met}}$$

The 3D view on the right shows a cylindrical domain with a central hole, representing a biological tissue. The axes are labeled x, y, and z, with values ranging from -0.02 to 0.04.
